

Lab Technologist– Microbiology (2207)

TerraBioGen Technologies Inc. is a leading agriculture/horticulture biotech company developing organically based bioactive materials that enhance crop quality, yields and tolerance to abiotic or biotic stress. We offer a diversified and inclusive work environment. Our goal is to attract, develop and retain highly talented employees who share a passion for global sustainability.

TerraBioGen is looking for an experienced and knowledgeable Laboratory technician with microbiology/agronomy background to join its research team and be part of a pioneering area of crop science.

Key responsibilities will include:

- Bacterial isolation and strain preservation
- Media preparation
- Data collection and documentation
- Inventory of fermented materials
- Supporting plant bioassay experiments and experimental optimization of products
- General Duties, washing glassware, material preparation, and agronomy support.

Qualifications required include:

- A post secondary education in Microbiology, Biology, Biochemistry, or a related field.
- 6 months to 2 years of laboratory experience
- Knowledge of laboratory biosafety and aseptic practices
- Bacterial culturing is considered an asset
- Successful candidates will be team players who are also able to work independently in a fast-paced environment
- Solid record keeping and organizational ability.
- Good time management and precision following SOPs.
- Willingness to perform repetitive work.
- Computer skills are necessary.
- Availability to work on weekends

Qualified candidates may submit their resume with cover letter to **info@terrabiogen.com** stating the job position in the Subject line. Only those candidates selected for interviews will be contacted.
